Install eSIM on iPhone or iPad (Printable version)

Prestart checklist

✓ A strong internet connection – Ideally, you will need to be on Wi-fi or have good 4G signal.

✓ An eSIM compatible device – If you are unsure, see list of compatible devices **here**

✓ Your device must not be locked to a single network.

✓ Update your iOS to the latest version.

New Click-to-Install feature

- You can now install your eSIM by clicking the link you received in your email. This makes life so easy!

- Minimum iOS 17.4 required.

eSIM name

- During installation, Apple assign a random name to your eSIM.

- In this guide we assume Apple labelled your new eSIM '**Business**'. It could be called '**Travel**', '**Mobile Data**', '**Personal**' or '**Secondary**'.

- Tip: Your Primary SIM will have your mobile number underneath.

PART 1: Install your eSIM

| Click eSIM link or scan	Tap **Allow**	Tap **Continue**	Tap **Done**	eSIM installed email

Note

- When installation is complete, you will notice 2 signal strengths at the top of your screen!

- Occasionally, Apple devices get stuck during installation, but do not worry, in most circumstances the eSIM has been installed.
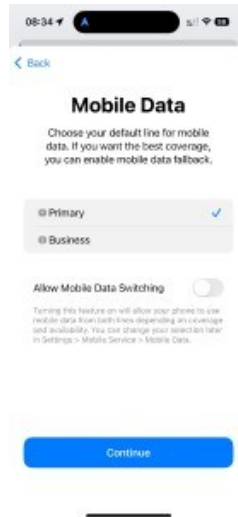

# PART 1: Install your eSIM (continued)
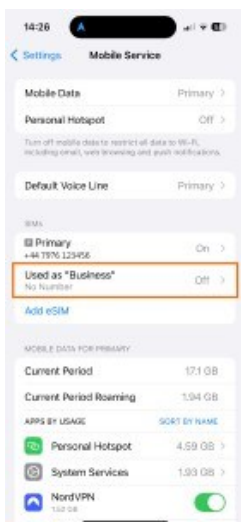

Set to **Primary**	Select All	Option A	Option B

PART 2: Activate your data bundle

Tap new eSIM	Tap to enable then **Back**	Tap new eSIM again &	Tap **Mobile Data**	Select new eSIM
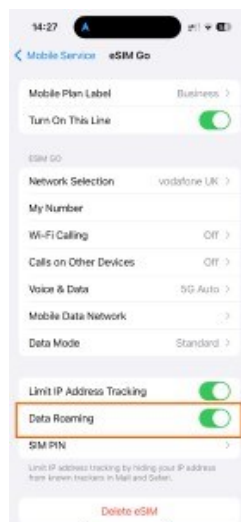

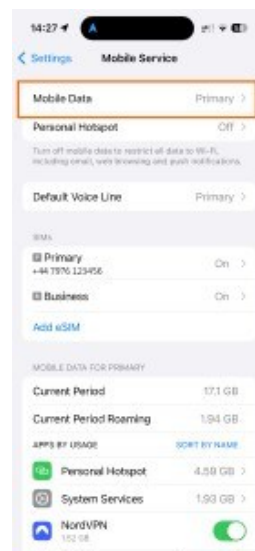

Tips

- The signal strength shown on top is the one being used for "Mobile Data".
- To save battery, turn off your new eSIM if you're not using it.
- We suggest you name your eSIM "easySim" so you can easily recognise it. To do this:
- Goto Settings > Mobile Service > "Secondary" > "Business" > enter "easySim" in CUSTOM LABEL

Wishing you safe travels, from all at **easySim**.global
